

Press Release

LIBERTY, TEXAS (OCTOBER 9, 2015) Beginning this week the City of Liberty Water/Wastewater Department will start inspecting manholes and sewer mains. Inspections of the sewer system will be performed by HR Green and will conclude by the end of November, 2015.

How will this affect the public?

HR Green will be manually inspecting to assess the condition of the system and will have vehicles on the road near manholes and mains during the inspection. No road closures are expected and temporary traffic control devices will be used to maintain roadway safety. Be aware that personnel may be in back yards and/or alleyways to inspect manholes and mains, but will not be doing inspections inside of homes.

Why is this needed?

This inspection will allow the City of Liberty to assess the condition of its manholes and the sewer mains connected to the manholes to identify needed repairs and prevent failures.
